27GLOBAL™

ENTERPRISE ARCHITECTURE

Sound enterprise architecture is crucial to the well-being of your organization, creating a holistic understanding of how your applications, people, process and data interconnect to support the execution of your business vision. 27Global offers the transformative solutions you need to translate that vision into an effective technology direction.

27Global's seasoned architects can build the blueprint you need.

Whether you have a large, sprawling, complex application portfolio or are just getting started, our Enterprise Architects have seen it all.

They take a data-first approach and will help you make sense of it all ensuring that you have a blueprint and road map for your technology transformation.

27 Global's five-phase approach to Enterprise Architecture

| Strategy & Definition	Current State	Desired State	Framework & Roadmap	Reference Architecture
GOAL: Define underlying business objectives and growth goals; Document high-level requirements for architecture based on goals	**GOAL:** Assess current enterprise architecture and functionality	**GOAL:** Define desired state as aligned with business objectives; Develop detailed baseline of its architecture	**GOAL:** Create a framework based on the desired state, best practices, industry trends, process optimization and solution experience.	**GOAL:** Develop Desired State reference architecture + requirements for supporting current and future needs
• Conduct an executive roundtable discussion focused on future direction. • Define business direction, growth and turnaround strategy and document strategy outcomes. • Determine proposed timeline	• Perform a system inventory of your application portfolio and document the applications' capabilities and importance. • Focus evaluation sessions on infrastructure, data, security, how systems and data integrate and how they interface with clients.	• Document needs and process improvements, conduct a gap analysis of current conditions and confirm the enterprise technology vision to close the gaps.	• The roadmap must document the overall strategy to go from the current state to the desired state. • Identify resource alignment, key implementation milestones, and opportunities for optimization existing processes, tech, etc.	• Identify technology solutions that support your goals, and review supporting projects and plans with stakeholders to ensure they're in line with meeting desired state goals.

THE 27GLOBAL SOLUTION

**In transforming your enterprise architecture, our team will:**

- Help clients articulate their vision for desired business capabilities then map to their applications, data and technology required to enable them

- Use a data- and tool-driven approach to represent this mapping in a digital, real-time and evergreen view of the enterprise

- Enable enterprise agility by defining a roadmap to deliver business value frequently while managing risks and compliance

- Establish effective governance and change management

- Streamline application portfolios

Why 27Global?

In addition to our Enterprise Architects, 27Global's software and data engineering, cloud transformation and product planning services ensure that we can transform your vision into reality. Our data-enabled EA deliverable allows clients to keep their architecture up to date.

Data-driven approach to help you make smart decisions quickly
