

AGENTIC AI READINESS

Assessment & Roadmapping

Know whether you're actually ready before you commit the build budget.

27Global's Approach to Agentic AI Readiness

AI commitment is accelerating faster than the foundation underneath it. Most failed AI projects aren't model problems. They trace back to data, integration, governance, and operational gaps that were never measured before the build began.

27Global's Agentic AI Readiness Assessment delivers an **independent, evidence-based baseline** of your ability to deploy and run production AI agents. We score what you actually have, using interviews, document review, and hands-on technical evaluation rather than a self-assessment questionnaire, with **no bias toward any cloud platform or vendor**.

PHASE 1

SCOPING & DISCOVERY

Understand the mandate

- Scope business use case & requirements
- Structured interviews across business, data, engineering, security & compliance
- Document intake & access setup

PHASE 2

TECHNICAL EVALUATION

Evaluate what you have

- Hands-on review of six technical & non-technical dimensions (*see pg. 2*)
- Data profiling against quality & PII/PHI controls
- Score use cases on impact, data readiness, & dependencies

PHASE 3

ROADMAP & READOUT

Turn findings into a plan

- Consolidate gap analysis by priority use case
- Build a costed, sequenced 12-18 month roadmap
- Live executive readout with full findings package

EXECUTION

The roadmap is yours to execute, or 27Global can deliver any portion.-

- AI POC Workshop
- Production agents
- Data platforming
- Cloud modernization

Client Responsibilities

Stakeholders available for discovery interviews || Executive sponsor engaged for scoping & final readout || Timely document intake & system access for technical evaluation

What We Evaluate: Six Dimensions, Scored Against Evidence

Strategy & Use Case Pipeline

Executive sponsorship, budget, success metrics, and agent use cases ranked by impact, feasibility, and process maturity.

Data Readiness

Data quality, access, lineage, and PII/PHI controls, plus the gap from lakehouse data to agent-ready context.

Technology & Integration

Cloud maturity, resilience, system APIs and agent tool access, and auth readiness (OAuth vs. static keys).

AI Governance & Risk

AI policy, risk tiering, agent permission limits, human oversight, and alignment with AI regulations and standards.

Talent, Culture & Change

Engineering depth, leadership AI literacy, resistance patterns, and capacity to absorb change.

Observability & AgentOps

Prompt and model versioning, tracing, evals, cost attribution, and drift alerting. Can you run an agent, not just build one?

*Each dimension scored 1-5 with peer benchmarking:

1 Unaware

2 Exploring

3 Developing

4 Scaling

5 Leading

What You Walk Away With

- Maturity scorecard with peer benchmarking
- Data & systems gap analysis for top initiatives
- Governance & regulatory risk report
- Use case feasibility & ROI estimates
- Roadmap with projected milestones
- Board-ready executive readout

Why 27Global? Independent AI Expertise

Independent by Design

AWS, Azure, Databricks, open-source, and on-prem evaluated on equal footing. You get your roadmap, not a vendor's adoption plan.

Built for Agents, Not Chatbots

We assess whether your systems are agent-ready and leave no stone unturned in ensuring your agents can act effectively and securely.

Full-Team Approach

Data, cloud, and application layers assessed together by practitioners who build these systems, sized and paced for the mid-market.

No Lock-In

Fixed fee. The deliverables are yours and don't require us, though 27Global can execute any phase of the roadmap when you're ready.
