

INFORMATION SECURITY & COMPLIANCE

Cybercrime and data breaches are on the rise, putting money and reputations at risk. Fortunately, taking the time to identify and remediate vulnerabilities during development can help secure both.

Our Process

27Global takes a comprehensive view of Information Security, from requirements definition through ongoing operations. We begin with two workstreams:

- 1) **DIAGNOSTIC REVIEW PRACTICES**
in software development, code management/deployment, testing, infrastructure deployment/operations
- 2) **A PENETRATION TEST**
of the live environment. We use the results to define actionable steps for optimizing each area of your organizations application and information security profile.

Lastly, we enable swift compliance to subsequent audits by gathering evidence and supporting materials into a compliance documentation vault.

You shouldn't have to worry about your information security. That's where 27Global can help.

INFORMATION SECURITY & COMPLIANCE

The 27Global Difference

At 27Global, we take a holistic approach to information security.

We perform security audits and penetration tests, as well as provide advice on best practices for:

- Identity management
- Firewall management
- Container security
- Web application security
- Data governance
- Vulnerability scans
- Intrusion detection

With our strong DevOps culture, cloud-native software expertise and Site Reliability Engineering practice, 27Global can deliver a comprehensive, end-to-end info security preparedness.

Founded in 2008, 27Global offers forward-thinking businesses custom development and tech strategies that help them elevate their competitive advantage. Created by local and global teams that take the time to discover your business needs and then assemble a solution that works for you and your processes, 27Global has the business acumen to understand your vision and the expertise to build your software solution.
